

# Memory Using High-Frequency Words

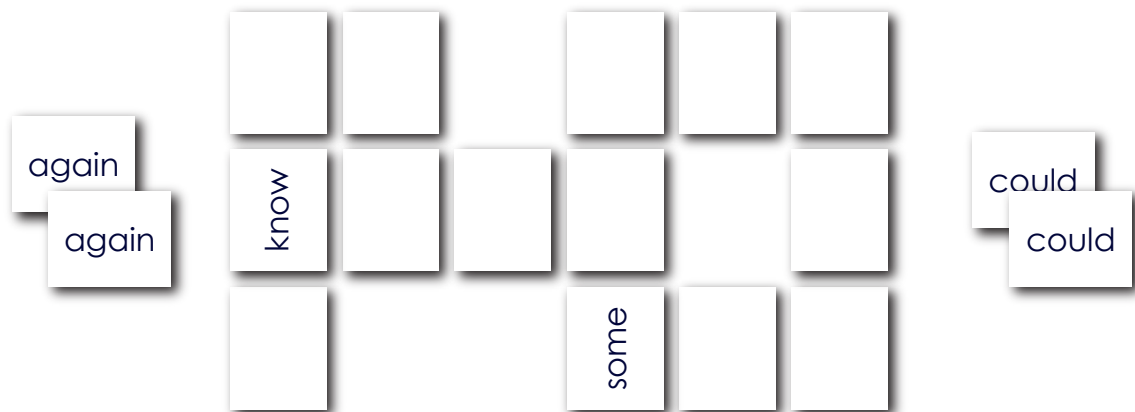

Use the provided high-frequency word cards to play a memory game with your child.

## Set up

1. Cut apart the high-frequency word cards. There are two matching sets of cards: one has a symbol on each word card (a star) and one does not.
2. Select nine high-frequency words. Use both word cards for each word you select, for a total of 18 cards. For example, if you select the word **any**, use the two **any** word cards, one with a star and one without it.
3. Place the selected cards face down in rows.

## Play

1. Take turns. Turn over two cards, read each card out loud, and determine whether the same word is on each card.
2. If the cards match (for example, **again, again**), place to the side. If the cards do not match (for example, **know, some**), turn the cards back over in their original places.
3. Continue until all cards are matched.
